 **Fleet Management**
Managed solutions, API integrated

CardiLink

Drahtlose Konnektivitätslösungen für CardiAid AEDs

Providing connected
safety solutions
as a Service

In today's world, customers expect a safety solution that works! And if you are the customer and user of the solution, why should YOU have to worry if the solution works? The provider of the solution should take care of this!

- Daily readiness updates
- SMS alerts when device is in motion

Get connected with as many AEDs as required.

Get advice from the experts on safe zones and AED placement.

Get the reports in your own IT system via API integration.

Get comfortable,
We take care.

- YOU need to walk around to check equipment?

That is the world upside down!

Let US remotely monitor this for you. Saving you time, money and organizational headache

- YOU need to call service?

That is the world upside down!

Let US inform you that an issue was detected at night which was fixed in the morning

- YOUR employees & customers unsafe while YOU wait for service?

That is the world upside down!

Let US fix it before rush hour so everyone is safe! No need for delays and unsafe situations

- YOU having to document everything?

That is the world upside down!

Let US document online and ensure your compliance

- YOU need to find this documentation in yet another IT system?

That is the world upside down!

Let US integrate the documentation and any ticket open and close with your current IT solution

- YOU need to worry about theft?

That is the world upside down!

Let US send notifications to your security guard with GPS coordinates when the AED goes beyond a pre-set geo fence

- YOU wouldn't know the AED was moved and then opened?

That is the world upside down!

Let US send notifications to your first aid team so they know where the AED went and that it is opened

Data transmitting
through secured and
encrypted networks
